

**New!** – Fits most standard 55 x 55 mm switch ranges

A wireless system that offers numerous possibilities.

A universal RF push-button for easy installation and comfortable living.

**EATON**

*Powering Business Worldwide*

# The Eaton remote universal switch: Diverse designs, more home comfort.

**The Eaton wireless system sets new benchmarks in wireless technology. A system for all requirements that controls, coordinates and optimises all possible functions for you.**

The new wireless universal switch can now be combined with more than 30 frame designs offered by leading switch manufacturers, thanks to its standard 55 x 55 mm dimensions. Its high adaptability and superb functionality are impressive:

- integrated surface adjustment
- compatible with international installation standards

## Four rocker button colours - countless combination possibilities

Eaton universal remote switches can be combined with more than 30 frame designs from well-known brands. The wireless switch module by Eaton and the rocker buttons in four different colours have been designed to match the frames of leading brands.

The colour schemes of the rocker buttons and switches satisfy both modern living standards

and the desire for timeless design. Thanks to the rocker button's four different colour variations in white, cream, silver and anthracite, it is possible to create countless combinations together with the frame designs that dominate the market. The switches can be mounted anywhere and can be glued to and removed from the walls, or from any other desired surface, without great effort.

Rocker button white

Rocker button cream

Rocker button silver

Rocker button anthracite

## One system, one universal RF push-button

The universal switches can be obtained in single-, double and in a 4-button version. All rocker buttons are optionally offered with and without LED functions.

The function LED indicates by blinking whether a sent RF command has actually been received.

# Eaton – incredibly compatible thanks to easy retro-fitting, expanding or upgrading.

To allow an easy installation, the push button module offers screw mounting as well as sufficient surface space on its rear side to attach the adhesive strips that are included with delivery. The integrated battery has a lifetime of approximately 10 years and can also be exchanged, if needed, in a few simple steps.

In addition, the universal switches come with an integrated surface adjustment. With this feature, unevenly plastered walls or gaps between the frame and the wall can be easily evened out.

## Installation made easy

Step 1:  
Mount the base plate

Step 2:  
Affix of the frame

Step 3:  
Click-in the switch's wireless module

Step 4:  
Affix the rocker button to the wireless module

## Configuration in three steps

The Eaton remote universal switch can be configured very easily: By pressing the programming button at the actuator, and the dedicated push-button, the pairing will be done.

# Modern, flexible living – it works wireless!

**Thanks to wireless technology, the switches can be easily glued to the desired location. As a result, the installations can be modified or upgraded at any time.**

## Problem-free connection to the existing installation

The Eaton wireless system can be perfectly connected to the existing electrical installation. Conventional switches are simply upgraded or exchanged

for remote switches. Table or standard lamps can be dimmed or switched on/off with RF adapters.

RF actuators can even be installed in cable conduit boxes and lamp covers.

## Can be upgraded or repositioned at any time

The reorganisation of furniture, the installation of new features, or the entire functional conversion of rooms - here, the

advantages of a wireless system become quickly evident. Remote switches can be easily installed on walls, tiles, glass or

wood. The running of wires or annoying cables along the floor are now a thing of the past.

## Eaton RF system – top in functionality

The RF system is perfectly managed by the two Top-House-Managers that are in charge of controlling all electrical functions in the house and coordinating them according to your individual needs.

**Home-Manager**  
A central control system for all electrical functions. The Home-Manager monitors all activities in the entire house and can easily be operated via mobile phone or the Internet.

**Room-Manager**  
The more compact version: The practical multi-function switch controls and monitors individual rooms or living areas.

# Eaton – functional with a “green” extra

**With the combination of universal RF push-buttons and the Home- or Room-Manager, Eaton provides a highly efficient system that convinces the customer through a wide range of possibilities - and through a large number of environmentally friendly aspects.**

The easy way of mounting or even retro-fitting the push-button brings it to a place within your reach. And your Room-Manager will tell you at the push of a button how much electricity you have saved with every quick flick of the wrist.
